Career Objective

Motivated Electronics and Communication Engineering student seeking opportunities to gain practical experience and work on innovative projects. Passionate about problem-solving, invention, and technology development, with a strong willingness to take risks, accept challenges, and deliver efficient solutions.

Education

Bachelor of Technology in Electronics and Communication Engineering, 2023 – 2027
NMAM Institute of technology Nitte, Karkala

PUC, Sharada PU college 2021 – 2023
Kodial bail, Mangalore

SSLC, St Michael's school 2021
Madikeri, Kodagu

Internship

Study of space agency 10/2023 – 05/2024
Studied JAXA space agency about its development and success rate failure rate of missions as 1st year internship

Experimind Labs Pvt. Ltd 06/2025 – 07/2025
Electronics Product Development Intern at Experimind Labs Private Limited .
Gained hands-on experience in electronics product development, circuit implementation, and practical problem-solving while collaborating on innovative engineering projects.

Technical Skills

- C programming language
- Python
- Soldering
- Project Presentation & Aesthetic Design
- Data analysis using Excel
- Internet of things

Soft skills

- Team coordination
- Time management
- leadership

Projects

Arudino based project

Study of arudino with different sensors like ultrasonic sensor, IR detective sensor, moisture detetive sensor, motion sensor

Automated Baby Cradle Using ESP32

Developed an IoT-based automated cradle that detects a baby's cry and automatically rocks the cradle to soothe the baby, improving infant comfort and reducing parental effort.

Line Follower Robot – Arduino Uno

Built an autonomous line follower robot for Incridea at NMAM Institute of Technology, using IR sensors and motor drivers to detect and follow a track accurately.

Sudoku Solver – Python

Created a program that solves Sudoku puzzles using a backtracking algorithm, demonstrating skills in algorithm development, logical reasoning, and problem solving in Python.

Driver Drowsiness Detection System – ESP32

Built a smart wearable system that detects driver sleepiness and provides alerts. If the driver fails to respond, the system slows the vehicle, activates emergency signals, and sends a notification to an emergency contact to improve road safety.

Password Detection System – Verilog

Implemented a digital password detection circuit using FSM design in Verilog, demonstrating skills in digital system design and hardware description language programming.

Activities

Core Member (Inventory) – Electronics Project Club (EPC)

Managed inventory of electronic components and tools, ensuring availability of resources for club projects and technical activities.

Thorana 2025 – Volunteer

Participated actively in organizing and managing the college cultural and technical festival **Incridea 2025**, assisting in coordination, setup, and smooth execution of events.

Lazzerena – Technical Event, Incridea 2025

- Participated in **Lazzerena**, a technical competition during Incridea 2025, helping with event management, coordination, and technical support for participants.

Interests

- Hobby projects
- Crafts
